Earth Sciences 4431a. Isotope Geochemistry in Earth and Environmental Sciences

Fall Term 2013

When:	Monday, Wednesday, Friday, 11:30 to 12:20 pm,	
Where:	University College, Room 142	
Instructor:	uctor: Dr. Fred J. Longstaffe, 1023 BGS (Biological and Geological Scienc	
flongsta@uwo.ca		
	Office hours: by appointment	

Teaching Assistant: tba

<u>Prerequisites:</u> Earth Sciences 2230A/B or 3341A/B or completion of any 2000 level half-course in Chemistry; or registration in the third or fourth year of an Environmental Sciences module; or permission of the Department. Unless you have either the requisites for this course or written special permission from your Dean to enroll in it, you may be removed from this course and it will be deleted from your record. This decision may not be appealed. You will receive no adjustment to your fees in the event that you are dropped from a course for failing to have the necessary prerequisites.

Mid-term test:	25%
Final examination:	35%
Review paper	20%
Problem sets	20%
	Final examination: Review paper

<u>Text Book</u>: Faure G. and Mensing T.M. (2005) Isotopes: Principles and Applications. John Wiley and Sons Inc., 897 p.

You can buy this book at the UWO Bookstore or through Amazon.ca. This book is also on hold for short-term loan in the Taylor Library. I have listed the book as required because you will need to gain access to it one way or another.

There are short readings associated with most lectures and you are expected to read this material.

Other materials for this course will be placed, as required, on-line on the OWL system: <u>https://owl.uwo.ca/portal</u>

Important dates:

- 1. Mid-term test: Friday, October 25, 2013 (during regular class time)
- 2. Topic for the review paper to be approved by Monday, October 21, 2013
- 3. Review paper due Friday, November 15, 2013
- 4. Refer to the lecture timetable for due dates of problem sets
- 5. Final examination date will be set by the Registrar's office

The Midterm examination date is firm and make-up examinations will not be permitted. Please talk to the instructor if you have valid reason for missing the examination. Late essays will suffer a 5% reduction per day on the final grade for the first 4 days. Essays submitted more than 4 days late will not be accepted.

If you are unable to meet a course requirement due to illness or other serious circumstances, you must provide valid medical or other supporting documentation to the Dean's office as soon as possible and contact your instructor immediately. It is the student's responsibility to make alternative arrangements with their instructor once the accommodation has been approved and the instructor has been informed. In the event of a missed final exam, a "Recommendation of Special Examination" form must be obtained from the Dean's Office immediately. For further information please see:

http://www.uwo.ca/univsec/handbook/appeals/accommodation_medical.pdf

A UWO Student Medical Certificate (SMC) is required where a student is seeking academic accommodation. This documentation should be obtained at the time of the initial consultation with the physician or walk-in clinic. An SMC can be downloaded under the Medical Documentation heading of the following web site: https://studentservices.uwo.ca/secure/index.cfm.

<u>Accessibility Statement</u>: Please contact the course instructor if you require material in an alternate format or if you require any other arrangements to make this course more accessible to you. You may also wish to contact Services for Students with Disabilities (SSD) at 661-2111 x.82147 for any specific question regarding an accommodation.

<u>Plagiarism</u>: Plagiarism is a serious academic offence. The UWO Senate Academic Handbook defines plagiarism as "The act of appropriating the literary composition of another, or parts or passages of his writings, or the ideas or language of the same, and passing them off as the product of one's own mind." Students must write their essays and assignments in their own words. Whenever students take an idea, or a passage from another author, they must acknowledge their debt both by using quotation marks where appropriate and by proper referencing such as citations. For more information see Scholastic Offence Policy in the Western Academic Calendar. Students are directed to read the appropriate policy, specifically, the definition of what constitutes a Scholastic Offence, at the following web site: http://www.uwo.ca/univsec/handbook/appeals/scholastic discipline undergrad.pdf

All required papers may be subject to submission for textual similarity review to the commercial plagiarism detection software under license to the University for the detection of plagiarism. All papers submitted will be included as source documents in the reference database for the purpose of detecting plagiarism of papers subsequently submitted to the system. Use of the service is subject to the licensing agreement, currently between The University of Western Ontario and Turnitin.com (http://www.turnitin.com).

<u>Electronic devices:</u> Scientific calculators are mandatory for all exams. No other electronic devices will be permitted.

Support Services:	Registrarial Services
	Student Support Center:

http://www.registrar.uwo.ca/ http://www.sdc.uwo.ca/

<u>Course Outline</u>: This outline is a guide only. Isotope Science is a dynamic tool that is applied to scientific research in many different fields. Course content may change depending on feedback from the class and current topics. If you have interest in a subject that is not covered here, please contact the instructor.

Part A – Stable Isotopes

1. Introduction

Importance to geological studies, isotopes of interest and some general principles, the atom, chart of the nuclides and isotopes, atomic mass units and atomic weight, binding energy, nuclear stability, cosmic abundance or the elements, the history of stable isotope geochemistry, definitions (the δ -value, α , $10^3 \ln \alpha$, Δ -value), standards, method of study, extraction techniques, mass spectrometry, laboratory tour.

2. Stable isotopes in the atmosphere and hydrosphere

Equilibrium fractionation of isotopes, kinetic processes, the meteoric water line, Rayleigh distillation, oxygen and hydrogen isotopes in rain, snow and ice, the oceans (evaporation, ice cap effects, pore waters in oceanic sediments), ground water, soil water, geothermal waters, formation waters in sedimentary basins, paleothermometry in the oceans and on land, the isotopic composition of the oceans through time.

3. Stable isotope variations in igneous rocks

Introduction, oxygen reservoirs (water, sedimentary rocks, the mantle and derivative rock types), mineral ordering, fractional crystallization, the oxygen-isotope geochemistry of granitoid rocks (normal ¹⁸O, low-¹⁸O and meteoric water interaction, high ¹⁸O rocks and the role of sediments, isotopic exchange between granitic rocks and their country rocks), oxygen-isotope geothermometry in igneous rocks, meteorites, mass independent fractionation.

4. Stable isotope variations in weathering and diagenetic processes

Submarine weathering, oxygen- and hydrogen-isotopes in soil clays and chemical weathering, carbonates and patinas, diagenesis (sandstone) and the Western Canada Sedimentary Basin

5. Carbon- and sulphur-isotope studies of organic matter, fossil fuels and related materials Introduction to carbon isotopes, carbon in modern biosphere (photosynthesis) and in soils, fossil fuels, and carbonates, study of diet and migration, atmospheric CO₂, carbon in the lithosphere. Introduction to sulphur isotopes, biogenic fractionation, sulphur in recent sediments, hydrocarbons, coal, igneous and sedimentary rock, ore deposits and the environment.

Part B – Radioactive and Radiogenic Isotopes

1. Radioactive decay

Introduction, decay mechanisms (beta, positron, electron capture, alpha), fission, rates of radioactive decay, half life, decay series and secular equilibrium, applications of natural radioactivity and units of radioactivity

2. An introduction to isotopic dating methods and radiogenic isotopes as tracers of geological processes

Introduction, K-Ar, Rb-Sr, Sm-Nd, U-Th-Pb (concordia, discordia, zircons, isochrons), extinct radionuclides, fission tracks, cosmogenic nuclides and ¹⁴C dating, heterogeneity of the Earth's mantle, Nd and Sr isotope compositions of the ocean.
