

How do we use vision for perception and action?

Researchers in the Department of Psychology at Western University are seeking volunteers for an experiment to study how people use vision to perceive objects and perform hand actions (grasping or tool use). The experiment will take between 30 minutes and 3 hours to complete. You will be compensated for your time.

You can participate in this study if:

- Your age is between 17 and 55 years
- You are right-handed
- You have normal vision (glasses or contacts are fine) and no history of visual or neurological disorders
- You have no history of "lazy eye" and have normal depth perception
- You are not prone to motion sickness

If you would like to participate, contact the Culham Lab at culhamlab@uwo.ca
